## Fluoridation - the everlasting dead flower of Deception

### Fluoride - osteosarcoma link covered up

By Glen S.R. Walker

Nothing has changed in the 60 years of fluoridation propaganda promotion of fluoridation except the particular toxic fluoride chemicals have resurrected the law of SORCERERS by turning garbage - fluoride - into gold for its endorsers and promoters.

The public is forced to drink the stuff promoted by your political representative "looking after your well-being", and pumping it into your home and giving the family an uncontrollable daily dose of fluoride in a manner completely contrary to scientific, medical and pharmaceutical principles, all under the scientific definition of a medicine.

**The people of the world, and in particular Australia, have never seen scientific proof of fluoridation safety and effectiveness, none of which can be supported under legitimate scientific studies, especially as the whole process of fluoridation is illegal in every concept of law and order.**

#### No published Scientific research proving fluoridation is safe and effective.

Of great concern to clear, honest, thinking scientists, is the question of why so many medical organisations, dental and political, aggressively pursue the promotional endorsement of fluoridation when they obviously know, as we do, and most people of the world who have studied the subject know, there is no published scientific research proving fluoridation is safe and effective.

The usual presentations under **Dental Science** are **Dental Slogans**, coined in the U.S.A., that usually satisfy under-intelligent people afraid of that Doctor (?) who fills their teeth.

In this regard the real meaning of scientific research is important, although seemingly not understood by ignorance or instruction from the Halls of Scientific Power where

doctors control pseudo-scientists.

The people of all countries are blinded by the professional scientific conjurers who lead that field, but in reality unknown to the public, it is a case of The Blind Leading the Blind, and the people attempting to live under such draconian laws in a supposed democratic country.

The history of fluoridation is documented in official publications over more than 60 years and their failed medical, dental concept still not proven, but politically accepted!

What is the difficulty for such grand people in professionally privileged positions of "trust"?

During the 1970's the amount of scientific data, not only questioning, but actually condemning the fluoridation claimed purpose, was outstanding in the scientific field of medicine.

#### Professional Scientific Gamblers.

The World Health Organization (W.H.O.) published books on fluoridation, warning of its danger to humans but at the same time suggesting it would stop tooth decay using fluoride in water and toothpaste, a case of professional scientific gamblers "backing themselves both ways".

Consider the following statement from the 360 page WHO book - "Fluoride and Human Health", 1970:

***"Whereas dental fluorosis is easily recognised, the skeletal involvement is not clinically obvious until the advanced stage of crippling fluorosis . . . early cases are usually in young adults whose only complaints are vague pains noted most frequently in the small joints of the hands and feet, in the knee joints and in the joints of the spine. These cases are frequent in the endemic areas and may be misdiagnosed as rheumatoid or osteo-arthritis."*** (p. 239)

Such scientific - medical statements by the WHO had to

be disproved and destroyed, in any manner, even to bury it in future discussion, all by that group of "highly-trained critical thinking scientists" and so the above statement disappeared from the public.

## Rigorous human study connecting fluoridation with osteosarcoma.

Dr. Bassin's research is considered the most rigorous human study on the connection between fluoridation and osteosarcoma, a rare but lethal form of cancer that affects males more than females.

Bassin's thesis was supervised by Professor Chester Douglass and funded \$1.3 million by The National Institute of Environmental Health Sciences (NIEHS). The Harvard University in investigating why the Harvard School of Dental Science epidemiologist (Douglass) told federal officials he found no significant correlation between fluoridated water and osteosarcoma in Bassin's research.

Bassin's Doctoral Thesis stated:

*"Among males, exposed to fluoride at or above the target level was associated with an increased risk of developing osteosarcoma. The association was most apparent between ages 5-10 years with a peak at six to eight years."*

Douglass has been teaching at Harvard University since 1978 but Douglass is also Editor in Chief for the Colgate Oral Care report that is supplied to all dentists in U.S.A.

## Conflict of Interest

One U.S. scientist questioned Douglass' involvement as Editor of a Colgate publication as "creating an appearance of a conflict of interest."

The matter has "gone quiet".

**Another case of buried official science! Note the WHO data above: "early cases are usually in young adults".**

Today we find Dr Bassin in a difficult situation with Harvard University and the "over-seeing Professor", who is alleged to have made false statements about Bassin's scientific findings of osteosarcoma in young children.

Over the long history of Fluoridation one matter stands out clearly. When scientists make public their scientific discovery of fluoridation harm to humans and almost before you can say "fluoride", a challenge is produced to denigrate the scientists and their research throughout the world, by Fluoridation Code manipulators with their "closeness" to the media.

This is called "Instant Science", full of unsubstantiated data, but given full open press world wide with a caveat to stop publication of scientific criticism of fluoridation.

# Toothpaste Tubes Corroded by Fluoride Toothpaste

## Major toothpaste manufacturers forced to use special tubes

by John T. Webber

When fluoride compounds were first added to toothpaste tubes to allegedly reduce tooth decay, normal toothpaste tube materials, such as annealed aluminium, were corroded by the fluoride, resulting in toothpaste leaking from the tubes. A corroded fluoride toothpaste tube was on display at Russell's Health Food Store in Sydney for many years.

When major toothpaste manufacturers woke up to the corrosive properties of fluoride in toothpaste, they used different tubes and different internal coatings on toothpaste tubes to prevent corrosive reaction between the fluoride toothpaste and the tube material.

**Replies from manufacturers of toothpaste to enquiries about the difference between tubes for normal toothpaste and tubes used for fluoride toothpaste:**

*"Gibbs S.R. tubes are aluminium, while Gibbs Fluoride tubes are lead."*

*"The reason we have adopted lead as the base metal for Gibbs Fluoride's tubes is that the Gibbs fluoride formula is unstable in the presence of aluminium ... The inside of the tube is double coated with wax to keep the paste separated from the tube, the neck with the screw thread is made of a plastic material set into the shoulder of the tube which ensures that the thread does not collapse in use. Finally the unprinted shoulder of the tube is plated with pure tin to avoid any corrosion which might occur."*

## ● Colgate-Palmolive Pty Ltd

CABLES & TELEGRAMS: "PALMOLIVE," SYDNEY	CODE: BENTLEY'S COMPLETE PHRASE
Colgate-Palmolive Pty. Ltd. (INCORPORATED IN NEW SOUTH WALES) Sydney, Australia

HEAD OFFICE: G.P.O. BOX 2701, SYDNEY TELEPHONE: WB 0211	
22nd April, 1964.	
Mr. J.T. Webber, [REDACTED]	
Dear Mr. Webber,	
We acknowledge receipt of your letter of 20th April, 1964, in which you request information on the composition of the collapsible tubes used for packaging of Colgate Dental Cream and Colgate Fluoride Toothpaste.	
Colgate Dental Cream tubes are made from annealed aluminium, and we would very much like to use a similar tube for Colgate Fluoride Toothpaste for reasons of quality of presentation and being cheaper in cost; however, the active fluoride in the Colgate Fluoride Toothpaste reacts slightly with the aluminium and makes this form of container unsuitable after a long period of storage. The collapsible lead tube used for Colgate Fluoride Toothpaste is internally coated with wax to prevent contact of the toothpaste with the tube.	
Thanking you for your enquiry.	
Yours faithfully, <i>R.F. Brady</i> R.F. Brady, Chief Chemist.	

*"Colgate Dental Cream tubes are made from annealed aluminium, and we would very much like to use a similar tube for Colgate Fluoride toothpastes for reasons of quality and presentation being cheaper in cost; however the active fluoride in the Colgate Fluoride toothpaste reacts slightly with the aluminium and makes this form of container unsuitable after a long period of storage. The collapsible lead tube used for Colgate Fluoride toothpaste is internally coated with wax to prevent contact of the toothpaste with the tube." (Emphasis added)*

Mr. J. T. Webber,  
 [Redacted]

Dear Sir,

In answering your inquiry on the need for variation between the tubes used for Fluoride Toothpaste against those used for Standard Toothpaste, we must first point out that whilst the variations are necessarily related to the variations in formula, this does not indicate that either formula could be considered to have harmful ingredients.

Both Kolynos Fluoride and Kolynos Standard tubes are made of aluminium, but the Fluoride tube is also coated on the inside with a resin called Araldite to prevent corrosion by the cream. (Lead tubes could be used as an alternative). There is no special significance in this as the tube would corrode if it contained a paste using common salt. The reaction of particular metals to particular chemicals does not necessarily indicate any harmful properties in the chemicals themselves.

We hope that this information meets with your requirements.

Yours faithfully,  
 INTERNATIONAL HOME PRODUCTS (AUST.) PTY. LIMITED.

Mr J T Webber  
 [Redacted]

Dear Mr Webber

You are correct in noticing differences in our tubes in which Ipana is packed and this is to ensure that the quality of the toothpaste is preserved.

Thanking you for your enquiry.

Yours very truly

DR BRIAN OXENHAM  
 MANAGING DIRECTOR

BO pp

*"Both Kolynos Fluoride and Kolynos Standard tubes are made from aluminium, but the Fluoride tube is also coated on the inside with a resin called Araldite to prevent corrosion by the cream. (Lead could be used as an alternative.) There is no special significance in this as the tube would corrode if it contained a paste using common salt."*

A further enquiry on their unrelated statement about common salt resulted in the reply that:

*"We regret to advise you that we have no details of tests of re-action on our toothpaste tubes with a paste containing common salt, and can only confirm this information was supplied to us by a qualified chemist."*

As usual with those promoting the use of fluoride, the claim about common salt was not substantiated, whereas the evidence of corrosion by fluoride in toothpaste is irrefutable.

● Nyal Company

**NYAL COMPANY**

DIVISION OF STERLING PHARMACEUTICALS PTY. LIMITED

BOX 3, P.O., ERMINGTON - 75-BY ATKINS ROAD, ERMINGTON, N.S.W.

26th May, 1964.

*"For reasons of product stability, Nyal Fluoride toothpaste is packed in a lacquer-lined aluminium tube. It is important to protect the fluoride content of the paste from reacting with the metal in the tube. The tube makers specify the coating as an "epoxy" lining.*

*Nyal Spearmint toothpaste has been shown to be perfectly stable in aluminium metal tubes and needs no special protection for the aluminium."*

*"You are correct in noticing differences in our tubes in which Ipana is packed and this is to ensure that the quality of the toothpaste is preserved."*

**Admission by all major Toothpaste Manufacturers that Fluoride Corroded Toothpaste Tubes**

All major tooth-paste manufacturers admitted that fluoride toothpaste reacted with normal toothpaste tubes, resulting in the toothpaste corroding through the tubes.

Toothpaste manufacturers then changed to plastic tubes, which overcame their fluoride corrosion problem.

**New Zealand Toothpaste Bungle**

*New Zealanders used a toothpaste for eight years which had enough fluorine to be officially classed as a poison. The toothpaste was Colgate Fluoriguard. After eight years the Health Department insisted that the elemental fluoride concentration be reduced to under 0.1 percent, as the toothpaste did not comply with the Food and Drug Act (New Zealand Truth, 20th October, 1982.)*

Dr. John Phillips, director of clinical services at the Health Department, made the incredible statement that:

*"The level of fluoride in the toothpaste was still lower than the level in some natural water supplies."*

Such a concentration of 1000 parts per million is massively above the concentrations in any naturally occurring potable water supplies. Where rarely occurring concentrations of fluoride of ever 4 parts per million occur in some locations in India, crippling skeletal fluorosis as well as dental fluorosis caused by fluoride reached endemic proportions.

## Tube of Toothpaste Could Kill

The ANZAAS conference in Melbourne was told that a tube of toothpaste contained about 75 mg of fluoride when 1mg was recommended dose. (**The Australian, 28 August 1985.**)

Dr. Mark Diesendorf of the CSIRO's Division of Mathematics and Statistics stated:

*"There is no doubt that this is a toxic dose which could even be fatal to some children."*

**Even a few milligrams of fluoride can be fatal, as illustrated by the tragic death of four year old Jason Burton. The death certificate stated that death was caused by fluoride poisoning, even though only a few fluoride tablets were consumed.**

**A tiny amount of fluoride certainly can be fatal, as sadly demonstrated by the \$750,000 award granted to the parents of a 3 year old child at Brooklyn, USA. The award was made on 19th January, 1979. The death of the child was caused by the swallowing of a legal dose of fluoride.**

The child was taken to a dentist for examination. The dentist found no tooth decay, and handed the patient over to a dental hygienist for a routine teeth-cleaning procedure. After cleaning, the child's teeth were painted with stannous fluoride (used in toothpastes).

After application the mouth should be rinsed with water and expectorated. Due to the carelessness or irresponsibility of the dental hygienist the child was not told to spit out the water and so swallowed it with fatal results. (**The Australian Fluoridation News - Aqua Pura, Vol. 16, No. 1, January-February, 1969.**)

## NOTICE: Fluoride Toothpaste and Water Fluoridation both unsafe

A document is at present being circulated throughout NSW asking people to sign and post to the NSW Premier. Our Organizations are not involved in any way.

We do not agree with the following paragraph of the document which in our opinion negates all other references in the document.

*"There is now no longer any independent scientific support for water fluoridation as an intervention that measurably reduces the incidence of tooth decay. Since the 1970's water fluoridation has been effectively replaced by topical fluorides (e.g. toothpaste) which are reported to be more effective than water fluoridation and are potentially safer because of not involving the intentional consumption of fluoride. See the Appendices for more detailed evidence in support of the following statements."*

**The use of fluoride toothpaste causes mottled teeth, that resulted in the Government forcing a 99% reduction of fluoride in toothpaste for children, from 2¼" to a smear. Irrespective of how fluoride toothpaste is used by adults, the fluoride plasma level in the body peaks far above the already elevated level in the blood when fluoridated water is used.**

**Our Organizations without exception will not and do not agree to any degree of the safety of fluoride toothpaste as claimed.**

Dress a fluoride monkey in any fancy clothes, but it still remains a monkey.

## The Fluoridation Honour Roll "JACK MUTTON"

Jack Mutton M.L.A. died 20th June, 2006, aged 91 years.

Our great interest and appreciation of Jack Mutton was his dynamic, intelligent and devoted force as an MP in the Victorian Parliament during the debates relative to the introduction of The Fluoridation Act 1972.

It took much courage and impeccable wisdom in his Sampson and Goliath encounters with the **combined** Liberal and Labor parties strongly supporting each other to the hilt, and voting in unison accordingly, to suppress the scientific evidence recorded in the Parliament by Jack Mutton's presentation.

Jack Mutton pulled off the greatest scientific rejection of the Hamer organisational political fluoridation agenda.

On 20th November 1973 (Hansard page 2293) Jack Mutton -

*"Mr. Mutton (Coburg) asked the Minister of Health if he would ascertain and advise:*

*(1) What research has been carried out by the Commission of Public Health, the Australian Medical Association (AMA), the Australian Dental Association (ADA), the National Health and Medical Research Council (NH&MRC), and the World Health Organization,, respectively, in relation to fluoridation of public water supplies?*

*(2) Which special investigating committees of such organisations produced a report on fluoridation, when it was produced, who were the members of such committees and what were their qualifications?*

*(3) Whether, as recommended by the National Health and Medical Research Council, a national study of water fluoridation under Australian conditions has been undertaken; if so what were the findings?*

*(4) Whether there is an optimum level of fluoride intake or whether this varies from person to person according to age, sex and individual bodily reaction?"*

**Mr Scanlon, Minister of Health:**

The answer is:

*"(1) No original research has been carried out by any of the bodies named. They are not research organizations but each has set up groups which have studied the voluminous literature on the subject published in many countries of the world."*

Little has changed during the past 33 years. The same groups still head the list of those endorsing compulsory fluoridating and Jack Mutton's question still remains cast in stone.

The same names and the Minister's answer in 1973 is relevant today, because nothing scientifically has changed - "Dental Slogans" are the "science" of those 1973 fluoridation promoters.

**It is this kind of political fluoridation nonsense that governs the Health of Victorian people and indeed replicated in all other States of Australia, where dependence on science is more in this vexed question of a medically failed concept.**
